ALELTR2

346 bp ss-RNA linear VRL 28-APR-1993
Rous-associated virus 2 (RAV-2) LTR with reverse transcriptase endonuclease cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                           Duyk, G., Leis, J., Longiaru, M. and Skalka, A.M.
Selective cleavage in the avian retroviral long terminal repeat
sequence by the endomuclease associated with the alpha beta form of
avian reverse transcriptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Original source text: Rous-associated virus 2 replication form I DNA, clone RAV2-2 [1], and plasmids pPG1 and pGJ14 [2].

Reverse transcriptage associated endonuclease (purified from avian sarcoma virus) cleavage sites have been mapped in two trandemly linked Rous-associated virus-2 LTR sequences. The enzyme may be involved in viral cDNA integration in the host, since it generates a 6 bp staggered overlap that spans the junction. The clone sequence (RAV2-2) corresponds to the unintegrated replicative form (RF) I of RAV-2.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
